

INSTRUCTIONS:

Goal of the Project:

In Class 53, we have learned to create an HTML page. In this project, you will apply what you have learned in the class to create a portfolio webpage.

***This is just for your reference. We expect you to apply your own creativity to the project.**

Getting Started:

1. Click on [Web Lab](#) and choose the Make a Web tab.
2. Sign in using a Google account.
3. Open the [link](#) and click on the **Remix**.
4. Rename it as **Portfolio**.
5. Start editing your code in the **index.html** file.

Find the missing blocks to complete the Project:

Specific Tasks to complete the Project:

- 1) Add the **name** of your web page. It could even be your name!
We use **<h1>** tags to create a BIG header.
<h2>, **<h3>**, **<h4>** tags could be used to create SMALLER headers.
- 2) Create two hyperlinks - Projects and About Me.

Note: Create an empty **aboutme.html** page for the hyperlink and link the project to the same page

- 3) Create a sub-heading using **<h2>** tags (remember smaller than **h1** tags). You can create a description using **<p>** tag which is used to write text in a paragraph.
- 4) Add images of the games you have created.
- 5) Add a hyperlink to the image using **<a>** link which takes to the game output link
Note: You can refer to this [link](#) for the output of the game which we did so far.
- 6) Add these icons at the end of the web page and link them to our social media pages..

Hint:

Refer this [link](#) for HTML tags

REMEMBER... Try your best, that's more important than being correct.

After submitting your project, your teacher will send you feedback on your work.
